

Adopting standards An evolving journey

Paolo Magnoni
Lead Architect
Shell

Cautionary note

The companies in which Shell plc directly and indirectly owns investments are separate legal entities. In this content “Shell”, “Shell Group” and “Group” are sometimes used for convenience to reference Shell plc and its subsidiaries in general. Likewise, the words “we”, “us” and “our” are also used to refer to Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. “Subsidiaries”, “Shell subsidiaries” and “Shell companies” as used in this content refer to entities over which Shell plc either directly or indirectly has control. The terms “joint venture”, “joint operations”, “joint arrangements”, and “associates” may also be used to refer to a commercial arrangement in which Shell has a direct or indirect ownership interest with one or more parties. The term “Shell interest” is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

Forward-Looking statements

This content contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management’s current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Shell to market risks and statements expressing management’s expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as “aim”; “ambition”; “anticipate”; “aspire”, “aspiration”, “believe”; “commit”; “commitment”; “could”; “desire”; “estimate”; “expect”; “goals”; “intend”; “may”; “milestones”; “objectives”; “outlook”; “plan”; “probably”; “project”; “risks”; “schedule”; “seek”; “should”; “target”; “vision”; “will”; “would” and similar terms and phrases. There are a number of factors that could affect the future operations of Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this content, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell’s products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks, including climate change; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, judicial, fiscal and regulatory developments including tariffs and regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; (m) risks associated with the impact of pandemics, regional conflicts, such as the Russia-Ukraine war and the conflict in the Middle East, and a significant cyber security, data privacy or IT incident; (n) the pace of the energy transition; and (o) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this content are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Shell plc’s Form 20-F and amendment thereto for the year ended December 31, 2024 (available at www.shell.com/investors/news-and-filings/sec-filings.html and www.sec.gov). These risk factors also expressly qualify all forward-looking statements contained in this content and should be considered by the reader. Each forward-looking statement speaks only as of the date of this content Nov 5th 2025. Neither Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this content.

Shell’s net carbon intensity

Also, in this content we may refer to Shell’s “net carbon intensity” (NCI), which includes Shell’s carbon emissions from the production of our energy products, our suppliers’ carbon emissions in supplying energy for that production and our customers’ carbon emissions associated with their use of the energy products we sell. Shell’s NCI also includes the emissions associated with the production and use of energy products produced by others which Shell purchases for resale. Shell only controls its own emissions. The use of the terms Shell’s “net carbon intensity” or NCI is for convenience only and not intended to suggest these emissions are those of Shell plc or its subsidiaries.

Shell’s net-zero emissions target

Shell’s operating plan and outlook are forecasted for a three-year period and ten-year period, respectively, and are updated every year. They reflect the current economic environment and what we can reasonably expect to see over the next three and ten years. Accordingly, the outlook reflects our Scope 1, Scope 2 and NCI targets over the next ten years. However, Shell’s operating plan and outlook cannot reflect our 2050 net-zero emissions target, as this target is outside our planning period. Such future operating plans and outlooks could include changes to our portfolio, efficiency improvements and the use of carbon capture and storage and carbon credits. In the future, as society moves towards net-zero emissions, we expect Shell’s operating plans and outlooks to reflect this movement. However, if society is not net zero in 2050, as of today, there would be significant risk that Shell may not meet this target.

Forward-Looking non-GAAP measures

This content may contain certain forward-looking non-GAAP measures such as adjusted earnings and divestments. We are unable to provide a reconciliation of these forward-looking non-GAAP measures to the most comparable GAAP financial measures because certain information needed to reconcile those non-GAAP measures to the most comparable GAAP financial measures is dependent on future events some of which are outside the control of Shell, such as oil and gas prices, interest rates and exchange rates. Moreover, estimating such GAAP measures with the required precision necessary to provide a meaningful reconciliation is extremely difficult and could not be accomplished without unreasonable effort. Non-GAAP measures in respect of future periods which cannot be reconciled to the most comparable GAAP financial measure are calculated in a manner which is consistent with the accounting policies applied in Shell plc’s consolidated financial statements.

The contents of websites referred to in this content do not form part of this content.

We may have used certain terms, such as resources, in this content that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. Investors are urged to consider closely the disclosure in our Form 20-F and any amendment thereto, File No 1-32575, available on the SEC website www.sec.gov.

Value of the Standard

2025 CONFERENCE

Importance of standards

IFSF standard body was found in 1993 (by Agip, BP, Conoco, Fina, Mobil, Shell and Total) to address forecourt device integration.

Retailer focus

- **Scale and Geography** - Necessity of multiple vendors
- **Architect own landscape and platforms** - Define core platforms, define processes and integration
- **Integration of solutions** - Effective, Reliable, Flexible, Supportable, Sustainable, Affordable
- **Sales and Customer satisfaction** - Deliver customer value and differentiating experience

Vendor focus

- **Architect own products and services**
- **Meet industry and Markets requirements** - Requirements, certifications, delivery and support
- **Integrate with Retailers' and other Vendors' platforms** - Flexible and affordable integration
- **Sales and Customer satisfaction** - Sell own products to Retailers

Industry Standards

- **Win-Win opportunities**
- **Reduce complexity**
- **Unified language**
- **Flexible composition of platforms and components**
- **Reduce Development and Integration cost and time**
- **Interoperability**
- **Simplify delivery, faster time to market**
- **Security, Trust and Compliance**
- **Scale**
- **Reduce Total Cost of Ownership**
- **Seamless customer experience**
- **Increase Revenues**
- **Be more competitive**

Adoption

2025 CONFERENCE

Adoption of a Standard

A successful adoption of a standard depends on various factors

- Addresses a concrete problem
- Delivers win-win opportunities for Retailers and Vendors
- Fit for purpose – It does not bring unnecessary complexity or dependencies
- Focuses on the right concerns – Not designed over existing legacy or proprietary logic
- Data dictionary and Data model well designed
- Integration and Use Cases are Generalised – e.g. not product specific
- Aligned with industry technology - Not obsolete, not soon outdated
- Embeds or Enables Security and Compliance
- Addresses the valuable interoperability – Not bound to critical technologies
- Simple, clear, well explained
- Leaves flexibility
- Deployment must be careful to limit customisation
- Timely available
- Breaking changes/version address new concrete problem – quality of governance

- Lock In blockers
- Vendors roadmap
- Cost of change
- Frequency of change
- Fragmentation of Standards
e.g. across geographies
- Proprietary legacy platforms
- Customization of standards
- Innovation / differentiation &
Time to market

Patterns and Adoption by Retailer

Compose Applications

Compose a platform leveraging different Applications, also from different vendors, to offer flexible platform.

Main example is integration at site, for forecourt pumps, prime signs, car wash, etc.

Integrate Applications

Compose different Applications, internal or from vendors, to realize end to end processes.

Main example is integration site and head office applications. E.g. payment, loyalty, product and pricing management, sales billing and settlement, etc.

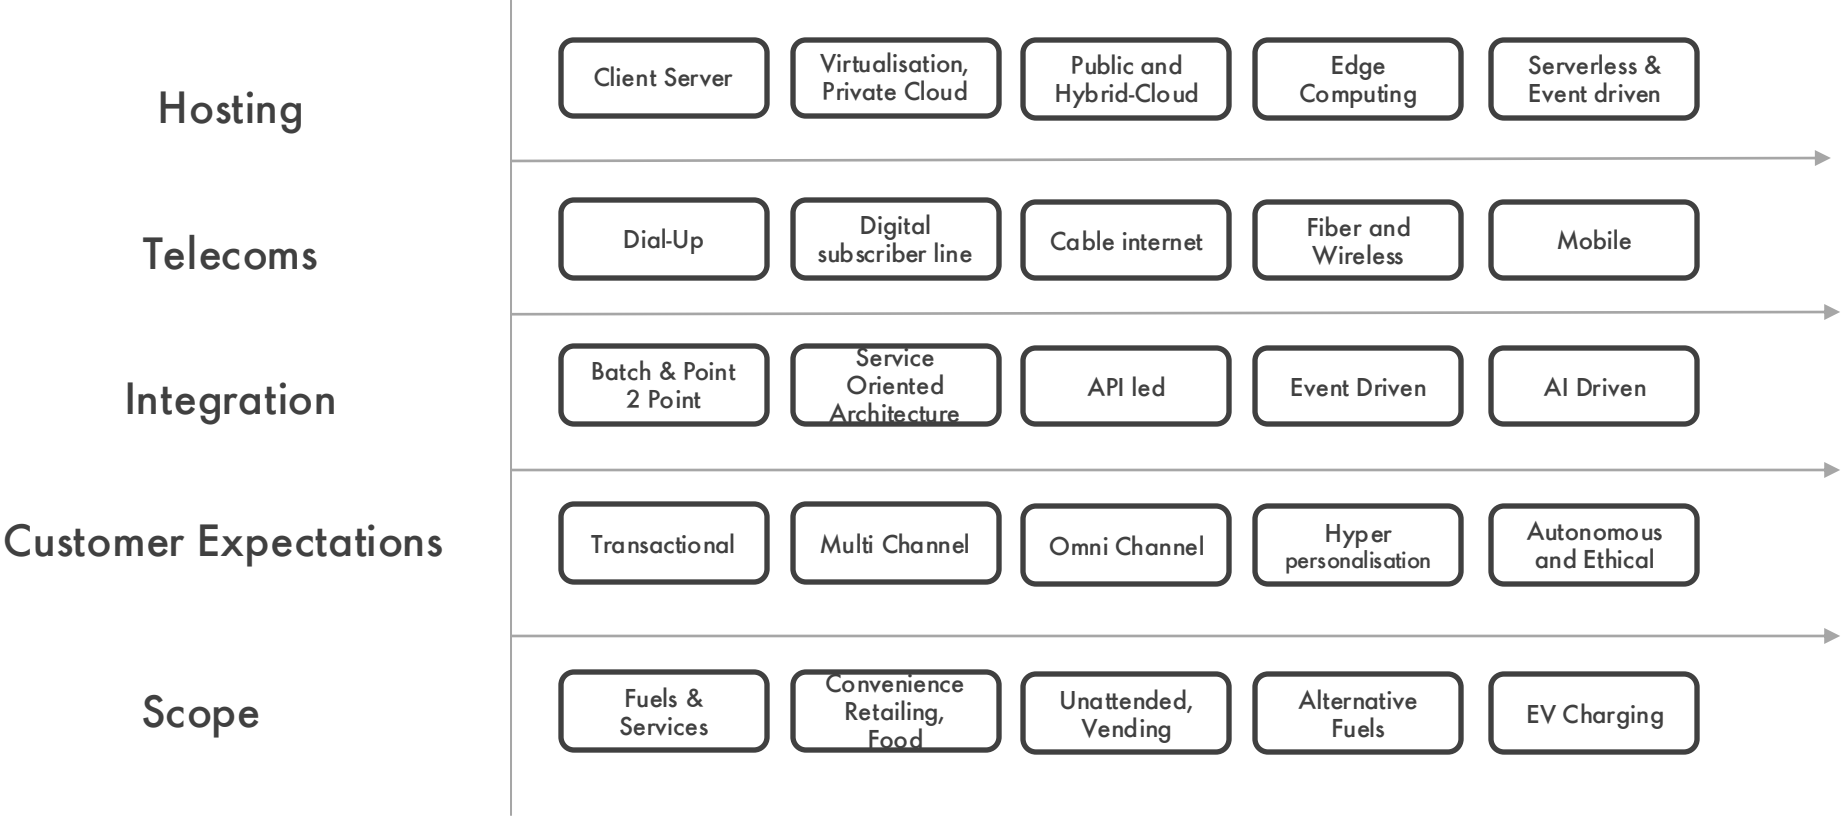

Evolution of Industry

2025 CONFERENCE

Evolution of the Industry

Current State

2025 CONFERENCE

Conceptual Integration

	Government Fiscal integration	POS BOS HOS (vendor)					
	Stock APIs	Receipt APIs					
	Pricing APIs	Transaction / Sale APIs			Bank/Acquirer integration		
	Wet-Stock APIs	Product APIs			Payment APIs		
Remote Management	Loyalty APIs	Fulfilment APIs	Car Wash APIs (vendor)	Vending Service (vendor)	IFSF ISO8583 Host 2 Host		OCPI
Event / IoT (vendor)	Fueling APIs	Order APIs	CarWash APIs	Vending APIs	IFSF ISO8583 POS 2 FEP		OCPP

Note: this is a conceptual list of integrations adopted or envisaged in Shell. There are differences in the scope and design, depending on the Region or other factors.

Colour coding intends association of integration having a level of affinity.

OCPI/OCPP standards are independent of IFSF and are mentioned as example of relevance of other industry standards.

	Car Wash proprietary or standard protocols	Vending proprietary or standard protocols	IFSF POS EPS	IFSF LON	
Point of Sale	Car Wash	Vending	Payment Terminals	Dispensers	Charging Points

Example

Designing APIs

Important Principles:

Generalized integration

Start from Data

Re-usable

Simple and fast to implement

Common Data Dictionary

Not unnecessarily complex

Not Point to Point

Car Wash example

Business Models

- Car Wash sale by Retailer/Dealer (Pricing by seller)
- Car Wash sale by Retailer centrally (Pricing by Network Retailer)
 - Valid at a single site
 - Valid at any site that adheres to the offer
- PrePayment at purchase, or at execution

Implementation Models

- Target – Car Wash code generator/verification central – vendor agnostic
- Pragmatic – Car Wash code generator/verification central – vendor specific
- Legacy - Car Wash code generator on site

User Experience

- Traditional – Receive Code, Enter code to activate
- Digital Seamless – Receive entitlements to execute the Car Wash, one button activation
- Note – HSSE controls to ensure that customer is at the right site, and car wash is ready for the customer

Exceptions

- Errors by customer (e.g. wrong site)
- Car Wash activation, with errors in / no execution
- Different Car Wash type/program selection at sites
- Code is valid at any site, or only if generated for/at that site
- Different days/hours of operation at each site
- Queue before car wash is available for the customer
- Customer unsatisfied willing to ask for reimbursement or damage reimbursement

Car Wash Operation

- Log of car wash events
- Levels of liquids, etc
- Equipment status, performance indicators, etc.
- Operation activities (e.g. cleaning, check state, etc.)
- Maintenance interventions (e.g. Brush replacement, Lubricants refill, replacement of parts, etc.)

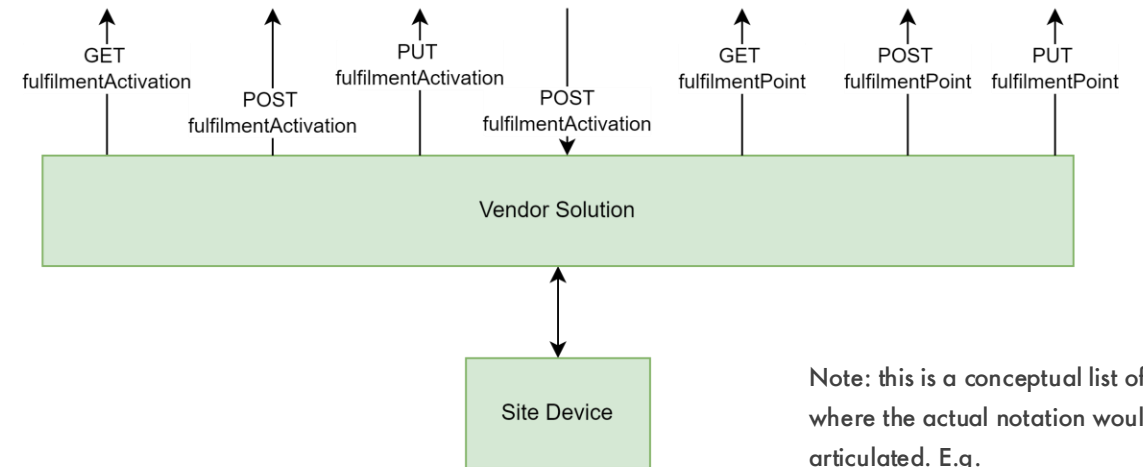

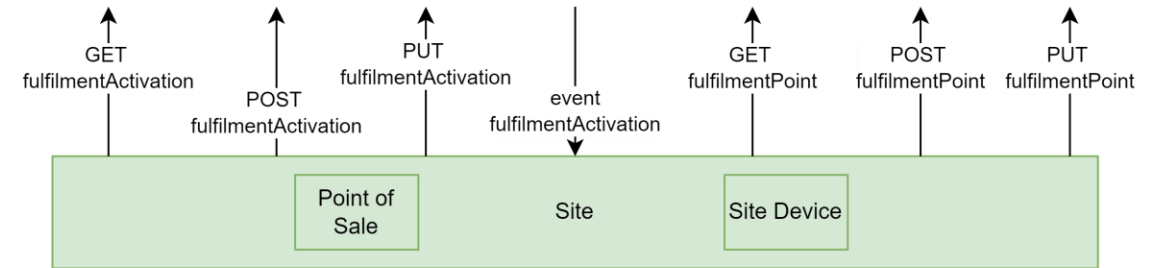

Car Wash APIs

- Simple focused on sale/fulfilment
- Customer Offer/Experience AND Business Model are independent of the Car Wash integration
- Generalised – What is different between Car Wash sale and Coffee sale ?
- Cope with different implementation models

CarWash example

When the primary target of the Retailer is to offer Car Wash independently of service providers:

- A same standard can be leveraged independently of the actual solution present at the site:
 - Legacy components integrated at site
 - Vendors' central solutions integrated with site components
- Why making this a Car Wash standard, if it can be generalised as a fulfilmentPoint standard?
 - Apply for vending and coffee machines, etc too

Note: this is a conceptual list of APIs where the actual notation would be more articulated. E.g.
PUT fulfilment/{fp_ID}/status

What Next

2025 CONFERENCE

Looking ahead

Notional direction for the industry

- Edge/IoT, Sensors, Event driven integration, Cloud for monitoring and central control
- Data integration from pragmatic trade off, to real time
- Perimeter based security is not sustainable or fit for purpose, enable Zero Trust
- Centralized data, not embedded in applications
- AI enabled analytics, enhanced customer offers and experience
- Agentic AI to automate business processes and provide integration flexibility

- Pragmatic Affordable & Sustainable
- Value driven, not Technology Driven
- Doable & Performing
- Encapsulate vendor/technology with open standard for Retailer or cross vendor interoperability
